

HH10

HH5

The HH10 handset is designed to suit the Tecpro communication system and is used in place of the traditional headset with master stations and HS120 series outstations. It features a dynamic microphone and earpiece unit for clear, reliable speech use. In the 'rest' position, both earpiece and microphone are muted. When the 'press-to-talk' key is operated, both earpiece and microphone become operational.

Supplied complete with wall hanging bracket and fitted XLR 4 pin connector.

Note that this item is not suitable for use with LS300 series talkback loudspeaker stations.

HH5

The HH5 handset is a 'fist' type microphone for use in noisy environments.

The Tecpro Communication System

Tecpro is a 'two wire' or, as it is sometimes known, 'party-line' or 'ring' system which enables a number of people to take part in the same conversation. Each participant can hear all other participants on the same circuit while being able to talk to them simultaneously, so a full 'duplex' conversation can take place – similar to a telephone system.

The major applications for these systems are in the theatre, conference, live performance and broadcast markets, though new applications are constantly emerging.

A basic Tecpro communication system would comprise a power supply and two or more outstations or belt packs. An outstation may be wall mounted, free-standing or mounted in a rack. It will usually have a built-in loudspeaker and possibly a microphone. Belt packs are intended for personal use and work only with a headset. Outstations and belt packs connect together with two core screened microphone cable which carries system power, audio, and various control signals. Most have a 3-pin XLR input and output and can be simply daisy-chained together. Alternatively interconnection can radiate out from a central, passive splitter. A combination of both methods is often used.

More complex systems can use a master station which has two in-built power supplies and offers two independent communication circuits, A and B, which can be linked if required.
