

MiniLINK Software Supports 64-bit Systems

The MiniLINK V3.07 software for the Acoustilyzer, Minilyzer and Digilyzer is now compatible with 64-bit versions of Windows 7 or Windows 8 operating systems.

MiniLINK allows documentation and data acquisition of all measurement functions for the Minilyzer ML1, the Digilyzer DL1 and the Acoustilyzer AL1. The instrument stores the test results in the internal memory, thus later the screenshots and measurement data can be transferred to PC for post processing.

NTi Audio's MiniLINK PC software V3.07 supports now 64-bit versions of Windows 7 or Windows 8 operating systems.

Download the new MiniLINK PC Software at the support page of your registered instrument at <http://my.nti-audio.com>.
